

Cost Savings and Potential Income Generating Case Study

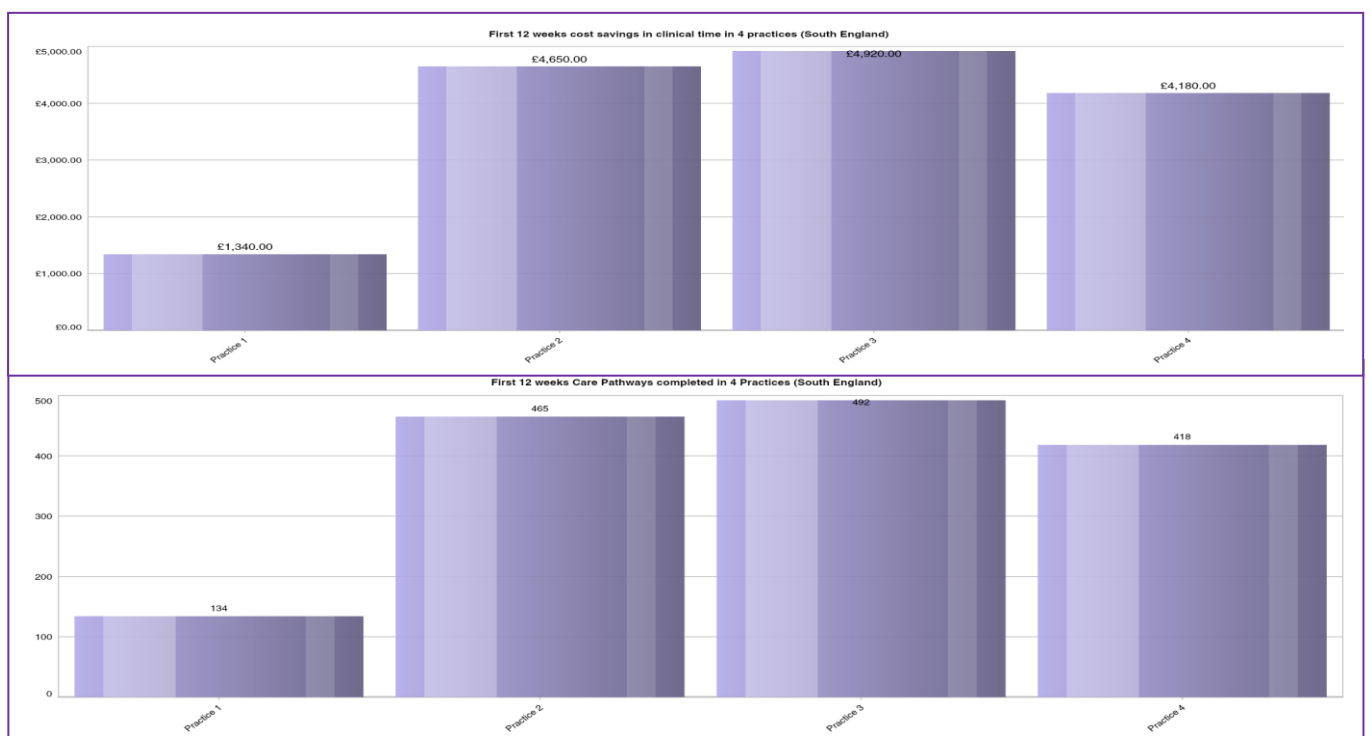

* Cost savings during the first 12 weeks of usage up to £4920 *

* Cost savings increase as kiosk is embedded into practice workflow *

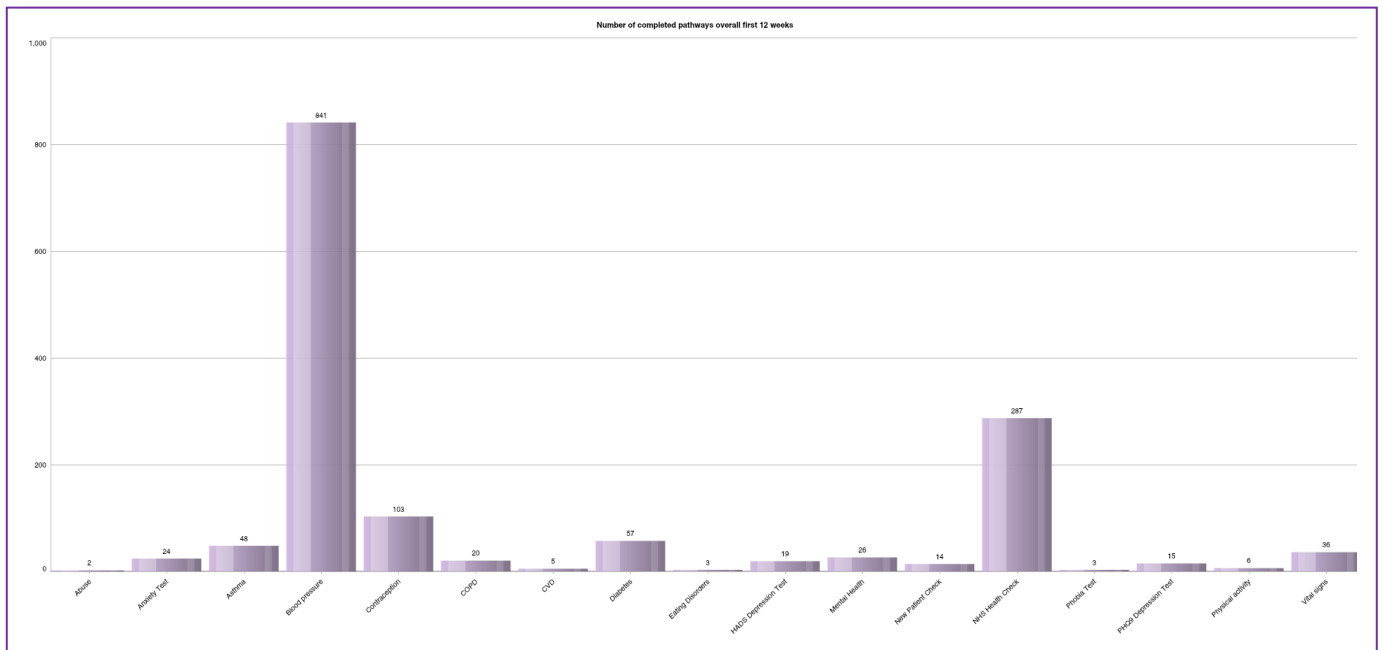

* Pathways completed contribute to QOF and Patient Health Check Income *

- Each completed pathway potentially saves £10 for the practice
- Each pathway saves the clinician a minimum of 2.5 minutes per a 10-minute appointment (calculated from actual time patient takes to complete pathway)
- The true cost of a 10-minute GP appointment is estimated by the NHS at £40
- Practices use the kiosk for screening element of the Patient Health Check

The following results show Self Health Kiosk usage during the first 12 weeks of implementation by a group of four practices in the south. We have calculated these costs based on a usage model in which the patient completes a care pathway in the waiting room prior to seeing their GP (in other cases the patient may be asked to complete a care pathway without booking an appointment);

Our range of care pathways have been devised in partnership with clinicians and can be personalised to your surgery requirements.
